

Password strength meter

Module documentation

Password strength meter adds meter under registration password field. The installation and configuration is very easy.

After installing the module you can configure it in very easy way.

The screenshot shows the configuration page for the Password Strength Meter module. The page title is "Configure Password strength meter". In the top right corner, there are navigation links: "Back", "Translate", "Check update", and "Manage hooks". The main content area is titled "PASSWORD-STRENGTH METER SETTINGS". It features a toggle switch for "Display text under password field" which is currently set to "YES". Below this, there is a text input field for "Text displayed under meter" with the placeholder text "Password is No" and a note "Enter file as placeholder for password strength level". There are five input fields for "Level 0 word" through "Level 4 word" with values: "worst", "bad", "weak", "good", and "strong". At the bottom, there are four color selection options: "Color 1" (blue), "Color 2" (yellow), "Color 3" (orange), and "Color 4" (green). A "Save" button is located in the bottom right corner.

Options to configure:

Display text under password field - you can switch this option to display the text or only the meter.

Text displayed under meter - you can specify your own text to display under the meter.

Level 0-4 words - displayed text depending of password strength

Color 1-4 - color of the meter depending of password strength.

Module configuration is very simple, but if you face any problems with it you can contact with the developer here:
